

DAIKIN SKYFI – DUCTED CONTROLLER

Daikin SKYFi

Daikin SKYFi puts your air conditioner's frequently used functions at your fingertips with an easy to use app.

In conjunction with Daikin's BRP15A61 SKYFi Interface*, the easy to use Daikin SKYFi controller lets you use your smartphone or tablet to control your Daikin Ducted air conditioning via Wi-Fi or the internet.

Compatibility

New Air Conditioners

The BRP15A61 SKYFi Interface can be fitted to all new Daikin Ducted air conditioners at the time of installation.

Installation charges may apply – contact your Daikin Specialist Dealer for more details on pricing and the installation process.

Existing Air Conditioners

All Daikin Ducted air conditioners manufactured since 2003 are potentially Wi-Fi capable with the addition of Daikin's BRP15A61 SKYFi Interface.

Note: Daikin's remote control communications protocol supports a maximum of two controllers. As the Daikin SKYFi control interface is recognised as a controller it cannot be installed on an existing system that already has two remote controllers attached (eg one downstairs and one upstairs).

Your Daikin Specialist Dealer can assess your system and, if compatible, install Daikin SKYFi in your home. Contact your local Daikin Specialist Dealer for pricing.

Adding Zone Control

For Zone Control functionality your Daikin Ducted air conditioner must be fitted with a Daikin Zone Controller (models BRC24Z4, BRC24Z8, BRC230Z4 or BRC230Z8) and associated zone control dampers.

* Interface and installation charges may apply – Contact your Daikin Specialist dealer for more information.

Install SKYFi

In order to use the Daikin SKYFi controller, a SKYFi Interface card must be fitted to your air conditioner.

Once installed, the SKYFi Interface card allows you to manage your air conditioner via the SKYFi app.

A one-off Installation charge for the SKYFi Interface card may apply, contact your Daikin Specialist Dealer for details.

Install The App

The Daikin SKYFi app is available for download, free from the iTunes store (iOS devices) or from Google Play (Android devices), simply download and install as you would any other app.

Future updates and enhancements will be made available free via the app stores as they are introduced.

How To Connect

1. Direct Connection

If you don't have a home Wi-Fi network, Daikin SKYFi will act as a Wi-Fi access point, so you can connect a single smartphone or tablet directly to your air conditioner when in range within your home.

2. Wi-Fi Connection

If you have a home or local Wi-Fi network, your Daikin SKYFi enabled air conditioner can be joined to your network by entering your network credentials in the Wi-Fi control app.

Once connected to your Wi-Fi network, you can control your air conditioner from any networked Android or iOS device.

3. Remote Access

If your Wi-Fi network has a permanent internet connection then you can control your air conditioner from anywhere your smartphone or tablet can connect to the internet.

Available free, with no subscription costs from Daikin, Daikin SKYFi's Remote Access means you can monitor and control your system from virtually anywhere, turning it on and off, or adjusting your in-home temperature settings, for a comfortable environment ready for when you arrive home.

With remote access, SKYFi also receives the latest SKYFi system updates automatically, so you'll always have access to the latest features as they're released.

Key Functions

Your air conditioner's main functions – On / Off, temperature, fan speed and operation mode are easily set or monitored via the app.

Additional functions such as easy set on/off timers, system configuration, maintenance functions and Dealer contact details are also available, for complete control of your in-home comfort via your Wi-Fi network or internet connection.

^ If fitted to your air conditioner

Zone Control

If your air conditioner is fitted with a Daikin Zone Controller, Daikin SKYFi automatically detects and displays your zones, so you can easily monitor and control each zone with a single tap. You can even name each zone, making it easy to remember which zone is which.

Depending on your model of air conditioner, indoor and outdoor temperature is also displayed on the app.
